Lifeline for The Spectrum Leisure Centre, Guildford.

The problem.

To provide access and to protect for individuals against the implications of a fall when working around the roof areas on the leisure centre.

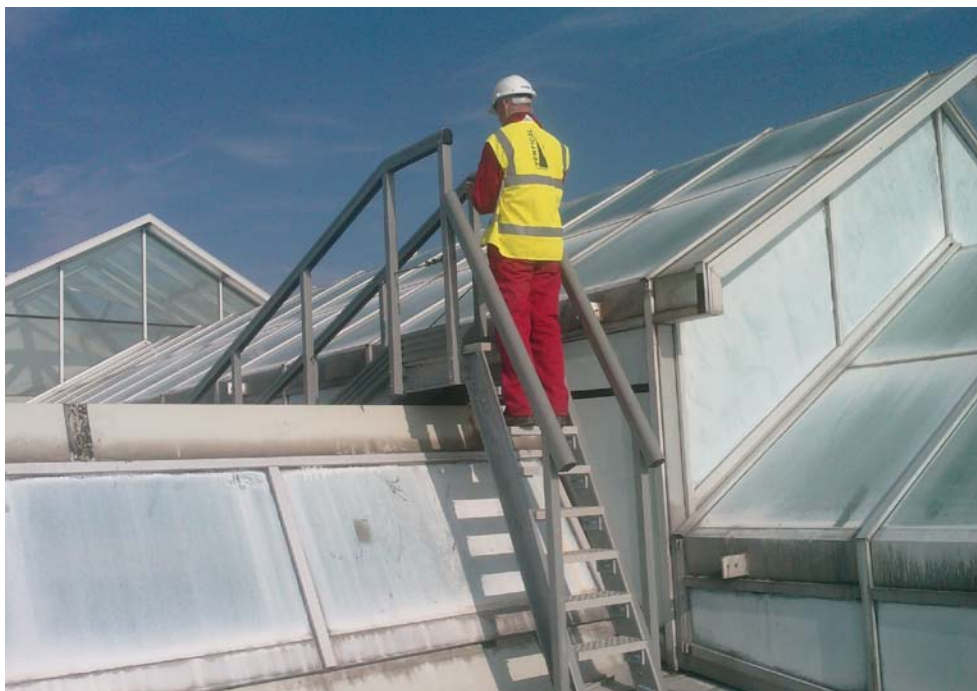

Roofsafe rail fitted to the built up metal roof sheets and contoured to follow the roof profile.

The solution

Vertical Technology undertook a detailed assessment of the structure and associated risks, appraisal of fixings and careful calculation resulted in the selection of the UniLine Roofsafe rail system:

Roofsafe is an aesthetically pleasing, low profile extruded aluminium rail system that enables free movement whilst minimising load transference to the structure. The rail was top fixed to the profiles metal roof sheets.

Fibreglass anti-slip textured access steps allowed access over the north light roofs.

Fibreglass anti-slip textured walkways provided a safe surface to walk on and protected the roof sheets from footfall damage.
